

Self-Assessment Works! Paper (R Citations)

Steven J. Pierce

Contents

1 Purpose.	1
2 Setup	1
3 Software Information	2

1 Purpose.

This file just produces a list of R and R package citations so that we can give appropriate credit to the many people who developed or contributed to the software we relied on in doing this work. It's a separate file so that we can reduce redundancy across other PDF files produced by the various scripts.

Version numbers in citations will be consistent with those used in other scripts if you knit this document from the same computer used for knitting those other scripts. Do that immediately after knitting all the other scripts.

2 Setup

Set global R chunk options (local chunk options will over-ride global options). The method for creating a size option that controls font size in code chunks and their text output is based on an answer to a question posted on stackoverflow.com.

```
# Create a custom chunk hook/option for controlling font size in chunk & output.
def.chunk.hook <- knitr::knit_hooks$get("chunk")
knitr::knit_hooks$set(chunk = function(x, options) {
  x <- def.chunk.hook(x, options)
  ifelse(options$cfsize != "normalsize", paste0("\n \\", options$cfsize, "\n\n",
    x, "\n\n \\", "normalsize"), x)
})

# Global chunk options (over-ridden by local chunk options)
knitr::opts_chunk$set(include = TRUE, echo = TRUE, error = TRUE,
  message = TRUE, warning = TRUE, cfsize = "footnotesize")

# Declare location of this script relative to the project root directory.
here::i_am(path = "inst/R_Citations.Rmd")
```

```
## here() starts at P:/Consulting/FY18/Winke_Paula/18-009/SAWpaper
```

Load R packages that we need to get additional functions.

```
library(here)           # for here()
library(rmarkdown)      # for render()
library(piercer)         # for git_report(), which_latex()
library(SAWpaper)        # For version information.
```

3 Software Information

We use R Markdown to enhance reproducibility. Knitting the source R Markdown script *R_Citations.Rmd* generates this PDF file.

- We used [RStudio](#) to work with R and R markdown files.
- Our software chain looks like this: **Rmd file** > **RStudio** > **R** > **rmarkdown** > **knitr** > **md file** > **pandoc** > **tex file** > **TinyTeX** > **PDF file**.
- Source script: *R_Citations.Rmd*
- We recommend using [TinyTeX](#) to compile LaTeX files into PDF files. However, it should be viable to use [MiKTeX](#) instead.
- We used [pandoc](#) 2.17.1.1 for this document.

This document was generated using the following computational environment and dependencies:

```
# Check and report whether we used TinyTeX or other LaTeX software.
which_latex()
```

```
## [1] "is_tinytex = TRUE. We used TinyTeX."
```

```
# Get R citation.
citation()
```

```
##
## To cite R in publications use:
##
## R Core Team (2022). R: A language and environment for statistical
## computing. R Foundation for Statistical Computing, Vienna, Austria.
## URL https://www.R-project.org/.
##
## A BibTeX entry for LaTeX users is
##
## @Manual{,
##   title = {R: A Language and Environment for Statistical Computing},
##   author = {{R Core Team}},
##   organization = {R Foundation for Statistical Computing},
##   address = {Vienna, Austria},
##   year = {2022},
##   url = {https://www.R-project.org/},
## }
##
## We have invested a lot of time and effort in creating R, please cite it
## when using it for data analysis. See also 'citation("pkgname")' for
## citing R packages.
```

```
# Get package citations.
citation("broom")
```

```
##
## To cite package 'broom' in publications use:
##
```

```
